

# Installing 3CX client on iPhone

1. Go to the App Store
2. Search for 3CX client
3. Install the 3CX Business Mobility-VoIP Client (Screenshot below)
4. Open the App and answer all questions asked allowing access to the features you want (Allow notifications, microphone access, access to camera, access to your contacts). You will need to allow access to the microphone to make and receive calls, and access to the camera is recommended to make configuring the application simple.
5. On your desktop PC in Outlook go to your “Welcome to CoC 3CX Phone System” email and open the “qr.png” attached image. The image will look like the example below. If you do not have your welcome email then you can submit an IT HelpDesk request to get it resent to you.

6. Using your phone with the 3CX app open, (If provision with QR is not presented already), select More on the bottom right, and select QR Provisioning.
7. The camera will be accessed. Hold your phone with the camera viewing the qr.png attachment open. The QR code will be read and the client will be configured for your account.

**3CX** 4+

Business Mobility-VoIP Client
